PROFESSIONAL SUMMARY

Data Analytics and Machine Learning professional with experience in workflow automation, business intelligence, data visualization, and machine learning solutions. Currently working as an AppSheet & Data Visualization Developer at Ambit Collective, supporting digital transformation initiatives through process automation, Power BI reporting, and stakeholder-focused business solutions.

PROFESSIONAL EXPERIENCE

AppSheet & Data Visualization Developer | Ambit Collective – Risk Advisory Department

Jan 2026 – Present

- Gather business requirements through client discussions, stakeholder meetings, and process reviews.
- Design and deploy AppSheet applications that digitize manual audit and operational workflows.
- Develop Power BI dashboards and reporting systems for management decision-making and operational monitoring.
- Manage application access, permissions, lifecycle maintenance, and user support activities.
- Conduct solution demonstrations, user training sessions, and enhancement discussions with clients and internal teams.
- Contribute to digital transformation initiatives by improving reporting transparency, process efficiency, and data governance.

TECHNICAL SKILLS

Python, SQL, Power BI, Excel, AppSheet, Streamlit, Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Seaborn, Tableau (Basic), GitHub, Jupyter Notebook

PROJECTS

Emotion Detection System | Ensemble Machine Learning

- Developed a facial emotion recognition system using PCA, SMOTEENN, XGBoost, Gradient Boosting, and Stacking Classifiers to improve prediction performance across emotion classes.
- Built a majority-voting ensemble architecture and deployed a Streamlit application supporting real-time webcam and image-based emotion detection.

Movie Recommendation System | Content-Based Recommendation Engine

- Built a recommendation system using movie metadata, CountVectorizer, and cosine similarity to generate personalized movie suggestions.
- Integrated TMDB API for dynamic movie poster retrieval and deployed an interactive Streamlit web application.

Book Recommendation System | Collaborative Filtering

- Designed a recommendation engine using collaborative filtering, popularity-based ranking, and cosine similarity on user-book interactions.
- Processed large rating datasets and created a Streamlit interface for personalized book recommendations.

Email & SMS Spam Classifier | NLP Project

- Developed a text classification pipeline using TF-IDF vectorization, text preprocessing, and Multinomial Naive Bayes.
- Evaluated multiple machine learning algorithms and deployed the best-performing model through a Streamlit application.

Zomato Restaurant Market Analysis

- Performed cleaning and exploratory analysis on 51,000+ restaurant records to identify trends in ratings, pricing, online delivery, and customer behavior.
- Generated business insights on restaurant performance, location attractiveness, and service-type

effectiveness using visual analytics.

PCOS/PCOD Healthcare Analytics

- Analyzed women's health data containing lifestyle, dietary, and medical indicators to identify factors associated with PCOS prevalence.
- Applied statistical analysis, correlation studies, and visualizations to uncover meaningful healthcare insights and risk patterns.

Tata Motors Stock Market Analysis

- Conducted long-term analysis of historical stock data covering price movements, volatility, volume behavior, and market trends.
- Applied statistical techniques, outlier detection, and distribution analysis to derive investment and trading insights.

EDUCATION

B.Com (Hons.), College of Vocational Studies, Delhi University (2021–2024)

Minor Degree in Management (2021–2023)

CERTIFICATIONS

Master in Data Science & Analytics with Artificial Intelligence – IT Vedant (2025–Present)
